WHAT DOES THE CURRICULUM SAY?

@danhaesler

FEEDBACK

Careless mistakes should be marked differently from misunderstanding. The latter may be best addressed by providing hints or questions – the former simply by marking the mistake as incorrect – without the right answer.

Awarding grades for every piece of work may reduce impact of constructive feedback as students may become preoccupied with the grade at the expense of a the teacher's formative comments.

Feedback should offer 'next steps' for improvement.

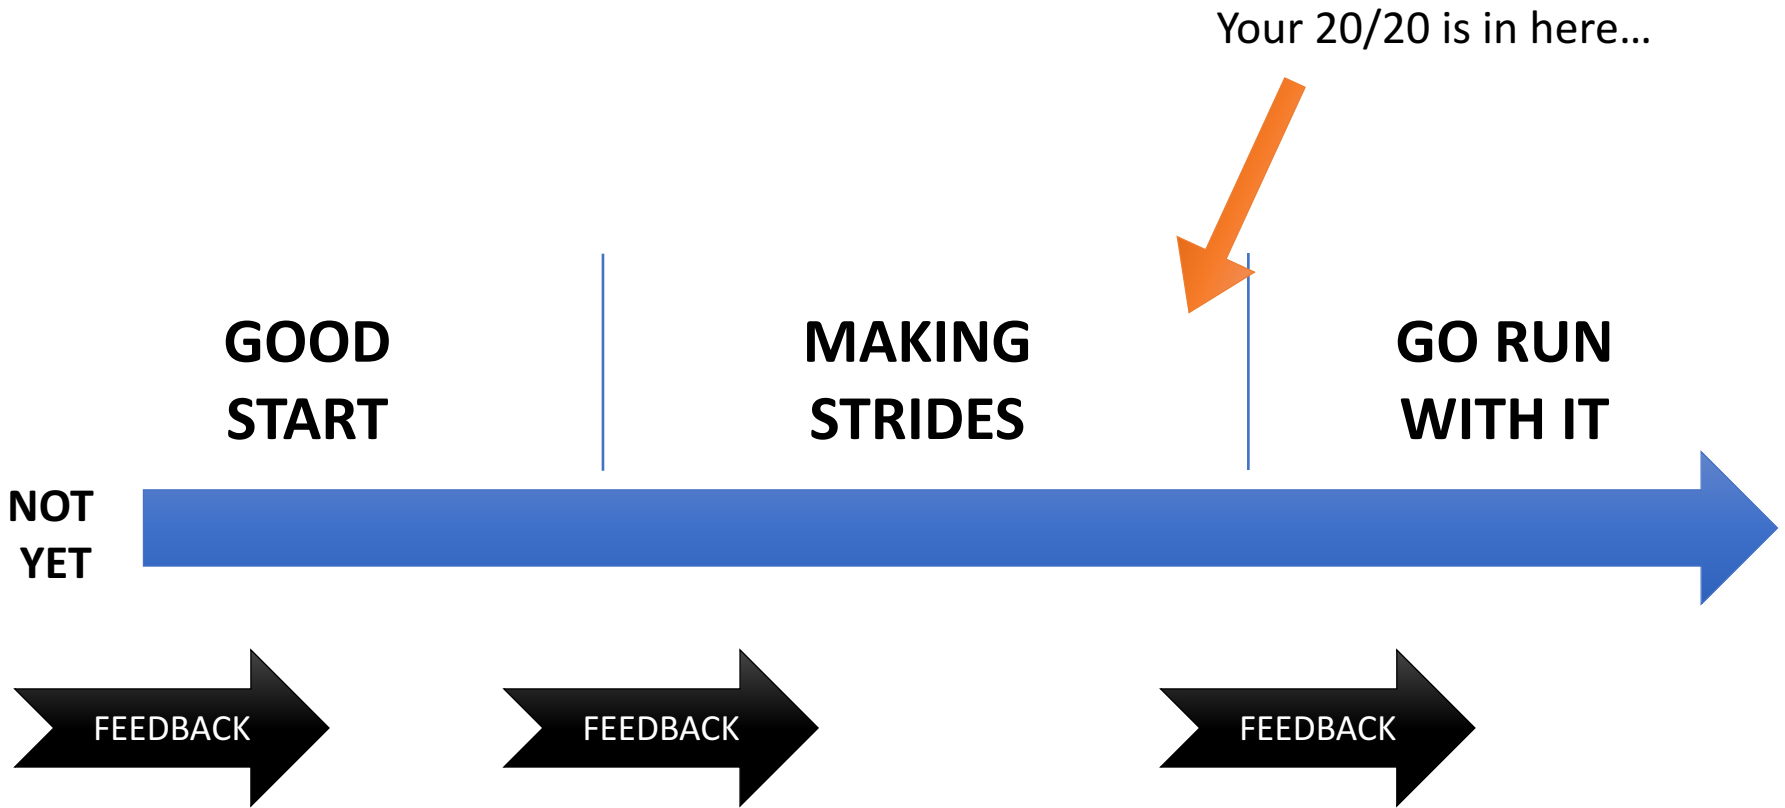

Students are unlikely to benefit from feedback unless they are given an opportunity to reflect or resubmit and preferably both.

Share **Learning Intentions** with students so they are able to monitor their progress towards them

Ensure that Success Criteria and our language in general promotes the belief that **ability is incremental** not fixed

Make it **more difficult for students to compare themselves** to others in terms of achievement grades - We want to avoid Performance, Competition, Anxiety

Feedback provides '**next steps**' & there is opportunity to reflect, or resubmit, preferably both.

Use every opportunity to **give students increased control** of their learning
